Requirements Specification — ATL-26

Project ATL-26 — Snapshot 2026-10-29

REQ-01: Residents can create a request and receive a tracking ID.

REQ-02: Residents can view request status and notification history.

REQ-03: Staff can triage requests; every status change creates an audit event.

REQ-04: The release candidate must achieve at least 80% automated test coverage.

REQ-05: The main resident flow must pass keyboard and screen-reader review.

REQ-06: Staging deployment must demonstrate a rollback before release approval.

Dependency: Security approval for staging API credentials remains pending; end-to-end integrati on is blocked.

Open clarification: performance test ownership, peak-load target, and response-time baseline ar e not recorded.
